Real Time Metering

Track Your Data And Usage In Real Time

- We'll collaborate with you to pinpoint the account(s) for which you need real-time data, and then survey the relevant utility meters and sites.
- If utility upgrades are required to support the data feeds, NuEnergen will coordinate that process on your behalf.
- Once the RTMs are ready, our IT team will ensure the broadcast of the RTM data to our cloud servers, and then transform the data so you can access it online.

Meaningful Intelligence

Customers seeking to understand and optimize their usage patterns often face frustration because invoices typically reflect consumption only after the fact. Real-Time Metering (RTM) addresses this issue by providing usage reports every few minutes.

Through our online portal, NuEnergen can report consumption either by connecting to an existing RTM or by installing a new one. Our meters are versatile and can record data for various commodities beyond electricity, including natural gas, steam, and solar data.

NuEnergen supports over 1,800 real-time data streams for multiple commodities

RTMs are not only valuable for continuous data review but also serve as excellent tools for customers involved in Demand Response. By using RTMs, you can track your performance in real-time during load shed events, helping you to optimize your revenues.
